## World Biomes and Ecosystems

### What is an Ecosystem?

Each individual \_\_\_\_\_ could not exist by itself on planet \_\_\_\_\_. All living organisms need millions of other living organisms to survive. How these organisms \_\_\_\_\_ with the sun, soil, water, air and each other in a specific area is called an ecosystem.

An \_\_\_\_\_ describes a specific area where the organisms work together as a unit. It could be any size from a tiny \_\_\_\_\_ of water to hundreds of square miles of desert. Each ecosystem is \_\_\_\_\_ and each has established a balance over time that is important to every form of life within the ecosystem.

### What is a biome?

A biome is way to describe a large group of similar ecosystems. Biomes have \_\_\_\_\_ weather, rainfall, animals, and plants. There are a number of \_\_\_\_\_ on planet Earth.

interact	ecosystem	different	Earth
pool	plant and animal	biomes	similar
